Can I Use a Waterbed Mattress on a Regular Bed?

With the existence of latex and memory foam mattresses, it seems like the popularity of waterbed mattresses have been eclipsed. But still, many people depend on its comfort. Water conforms to your body and will envelope you to achieve plush comfort.

Another advantage of using this bed is that you can heat it up or cool it down. During winter, you have the benefit of using a mattress that is nice and warm. However, not too many people are raving about its support to the body.

Another downside to using this mattress is that you need to have a bed frame with rails at the sides. They cost a lot of money and not many people can afford to shell out that amount. You can use a regular bed with no rails on the side with a few points to consider:

1. The waterbed mattress should be integrated with a wave less style. In this way, there is a semi-frame already inside the mattress so it can hold its shape much better. They are also called softside waterbeds.

Do not purchase the wavy ones, also called the hardside waterbeds, as they need the full support of a framed bed. If you use it on a regular bed, the sides will fall off for sure.

2. It has to be the right size. Measure the right size of your regular bed and find a mattress that fits that perfectly. The right measurements are necessary as this mattress is not as firm as the others and it does not hold its shape that well.

You can always look for a bed frame with the grills on the edges for a cheaper price. Scour online sites like craigslist for a cheaper deal. This way you can still use the hardside mattress.

Another option is to put grills on the side of your regular bed. If it is made of wood, you can always have a carpenter attach grills so a hardside waterbed can fit it perfectly.

This mattress really has some crucial pointers you need to take into consideration. Unlike other mattresses, they are not as easy to use and to set up. This is probably why many are going for other mattress technologies and even opting for innersprings instead of this one.

However, if you think this is really the right one for you, then consider the things mentioned above. That way, you can have the best waterbed mattress set up.
